Chief Architect

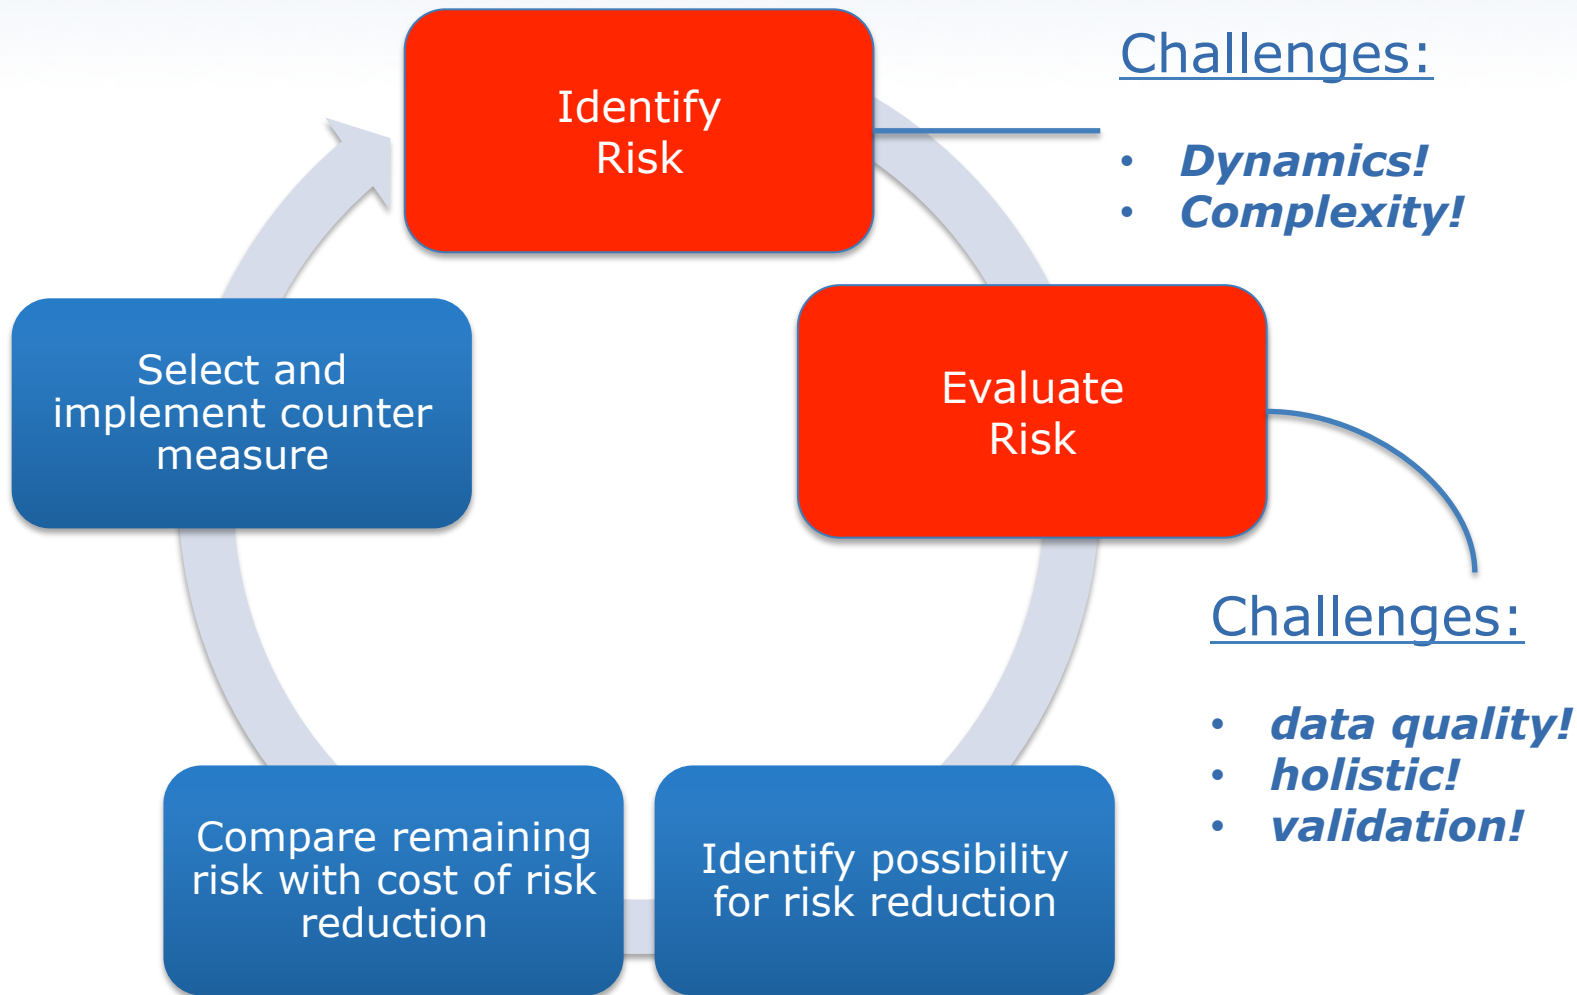

# Whoops where is the Computer Center?

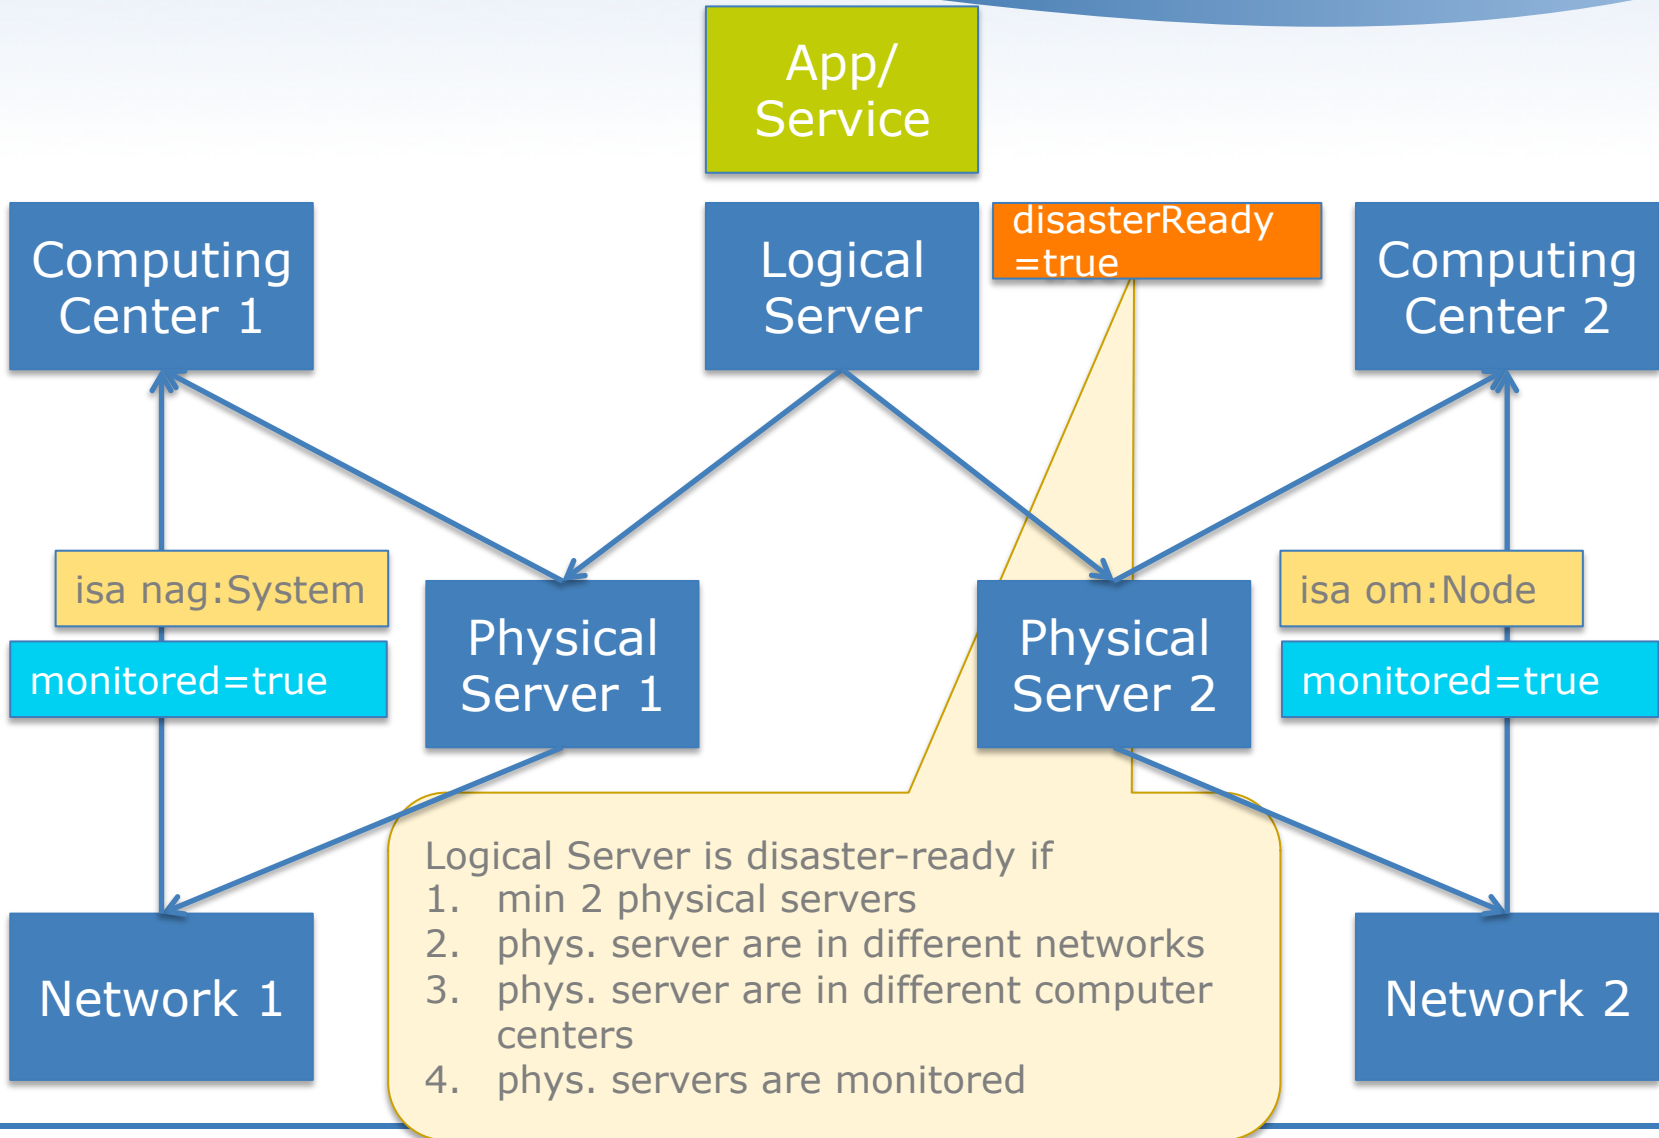

Guatemala City sinkhole  
Huffington Post, 2010

A rationale IT Risk Management requires most notably a Relationship **Management!**

# Usecase: Disaster Readiness - Cluster

Business

interesting questions and applications with relevance!

Gap,  
different terminologies, different goals,  
different tools, different approaches

ITOM Data Silos

# Why use Ontologies for IT Management?

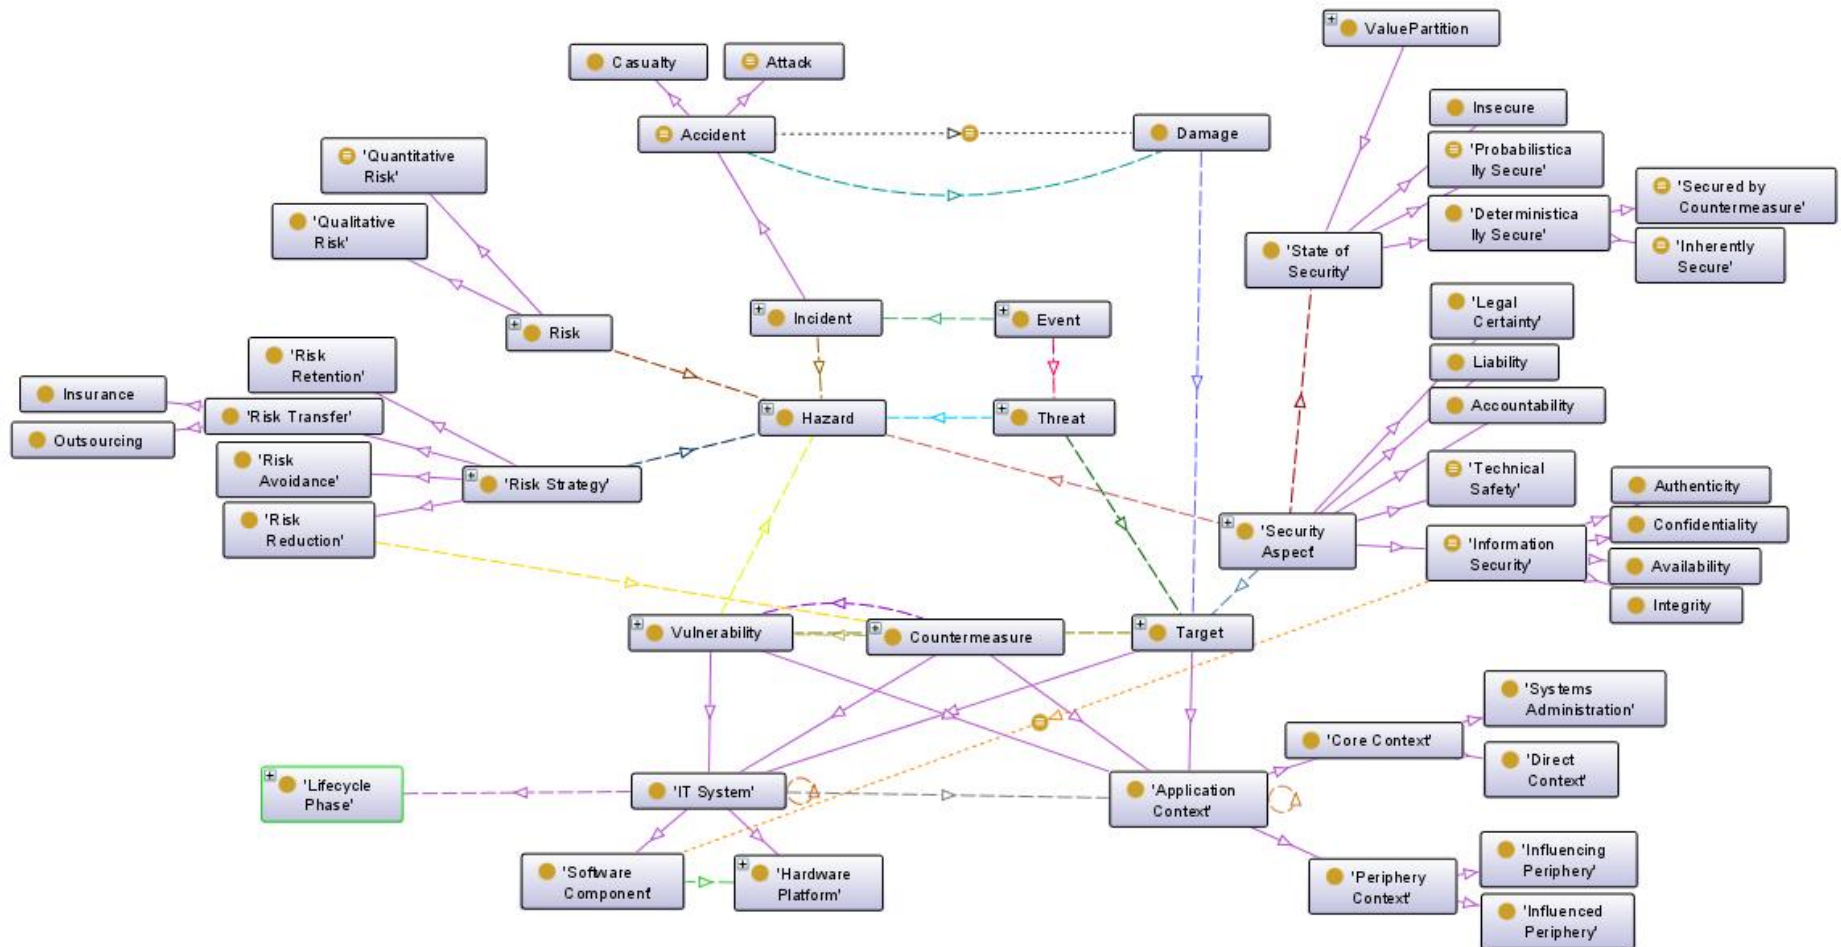

- Iterative modelling
  - add properties later
- Different views on the same instance model
  - company-specific data model and still talk about same thing
- UML is made for modelling software, OWL for concepts and systems
  - constraint-based or set-based class definitions
  - one individual can have multiple classes
  - modelling like a human: example red wine
- Built-in integration capabilities
  - OWL sameAs

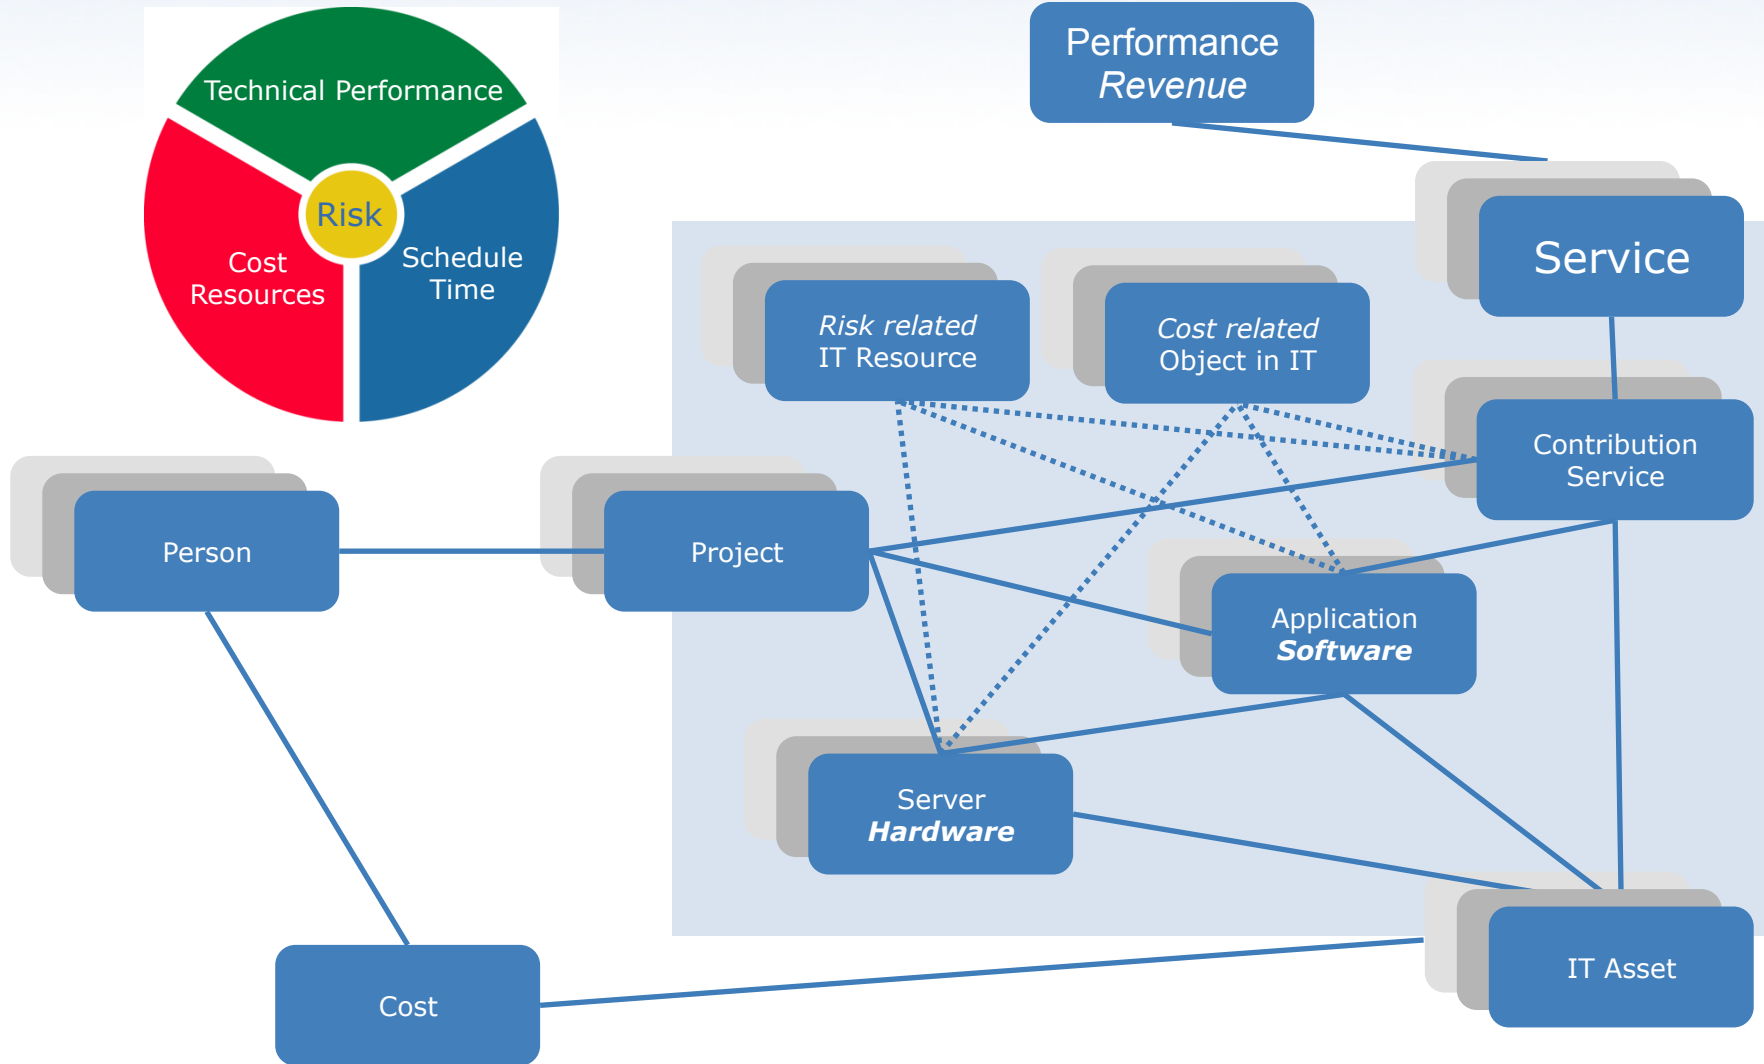

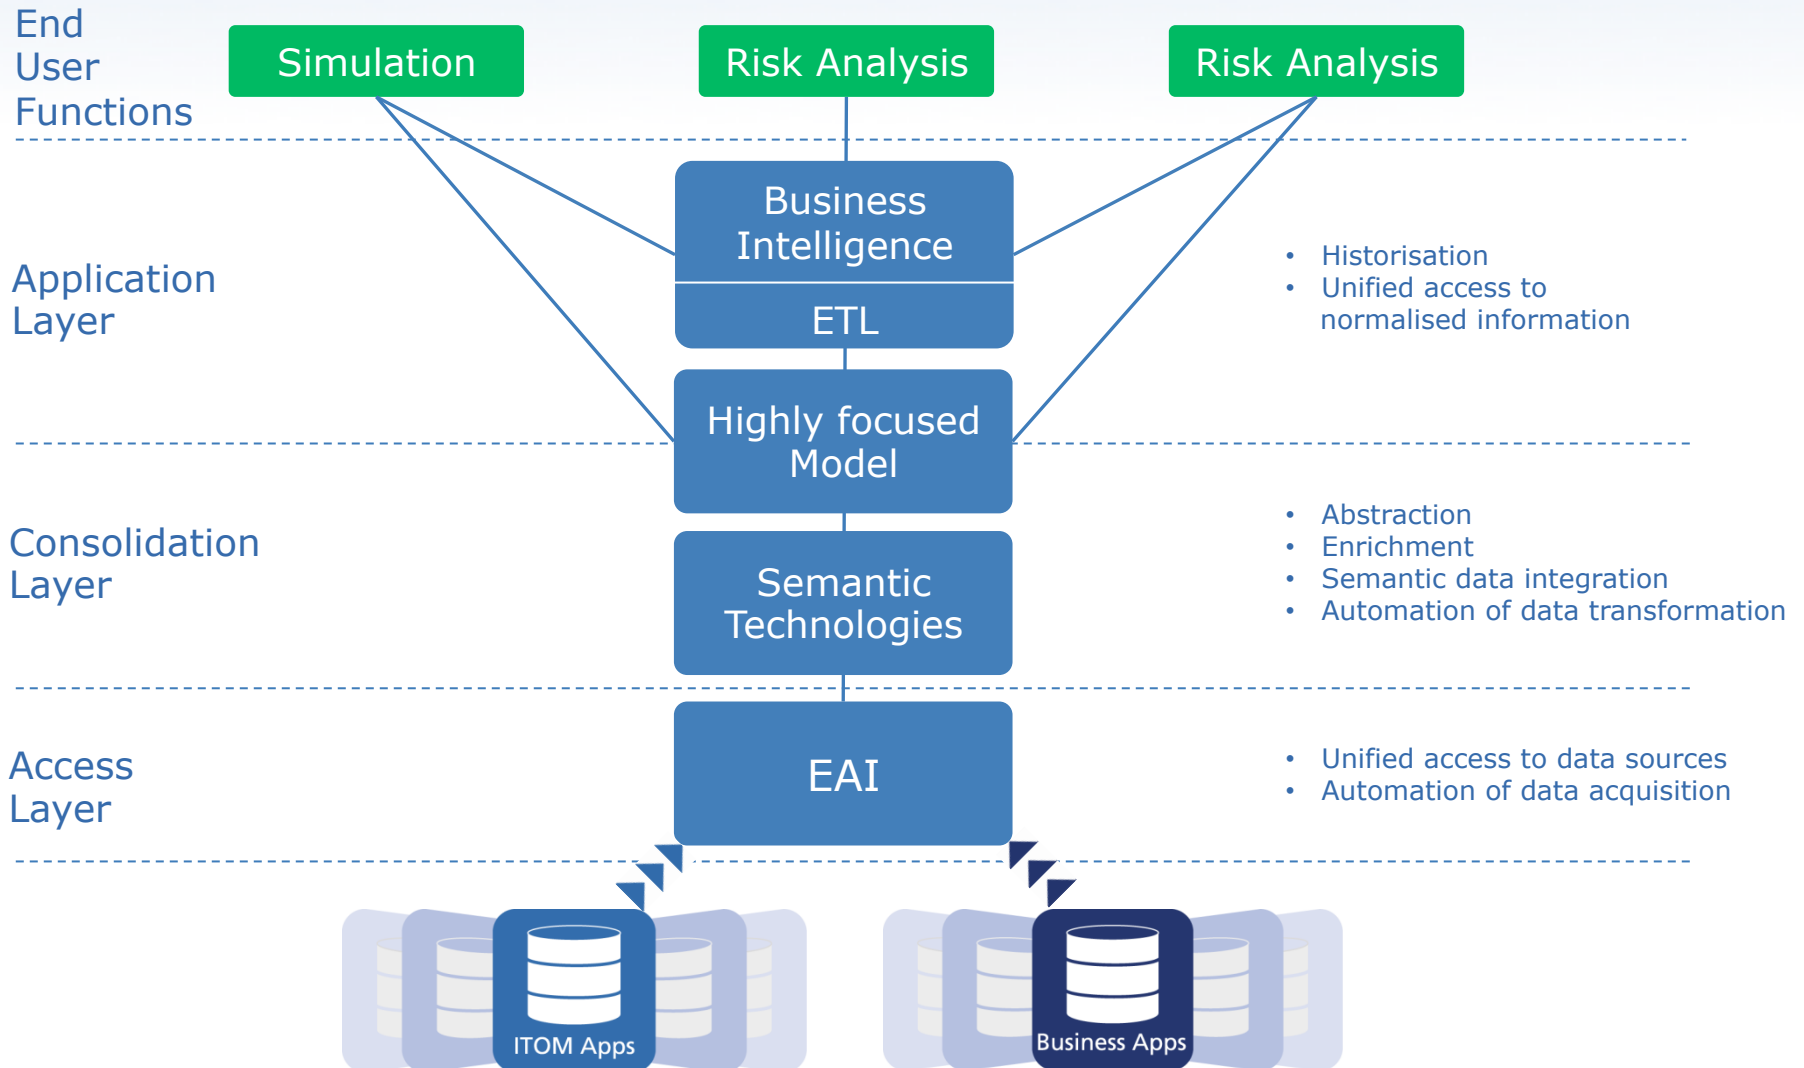

# Riskmanagement Ontology

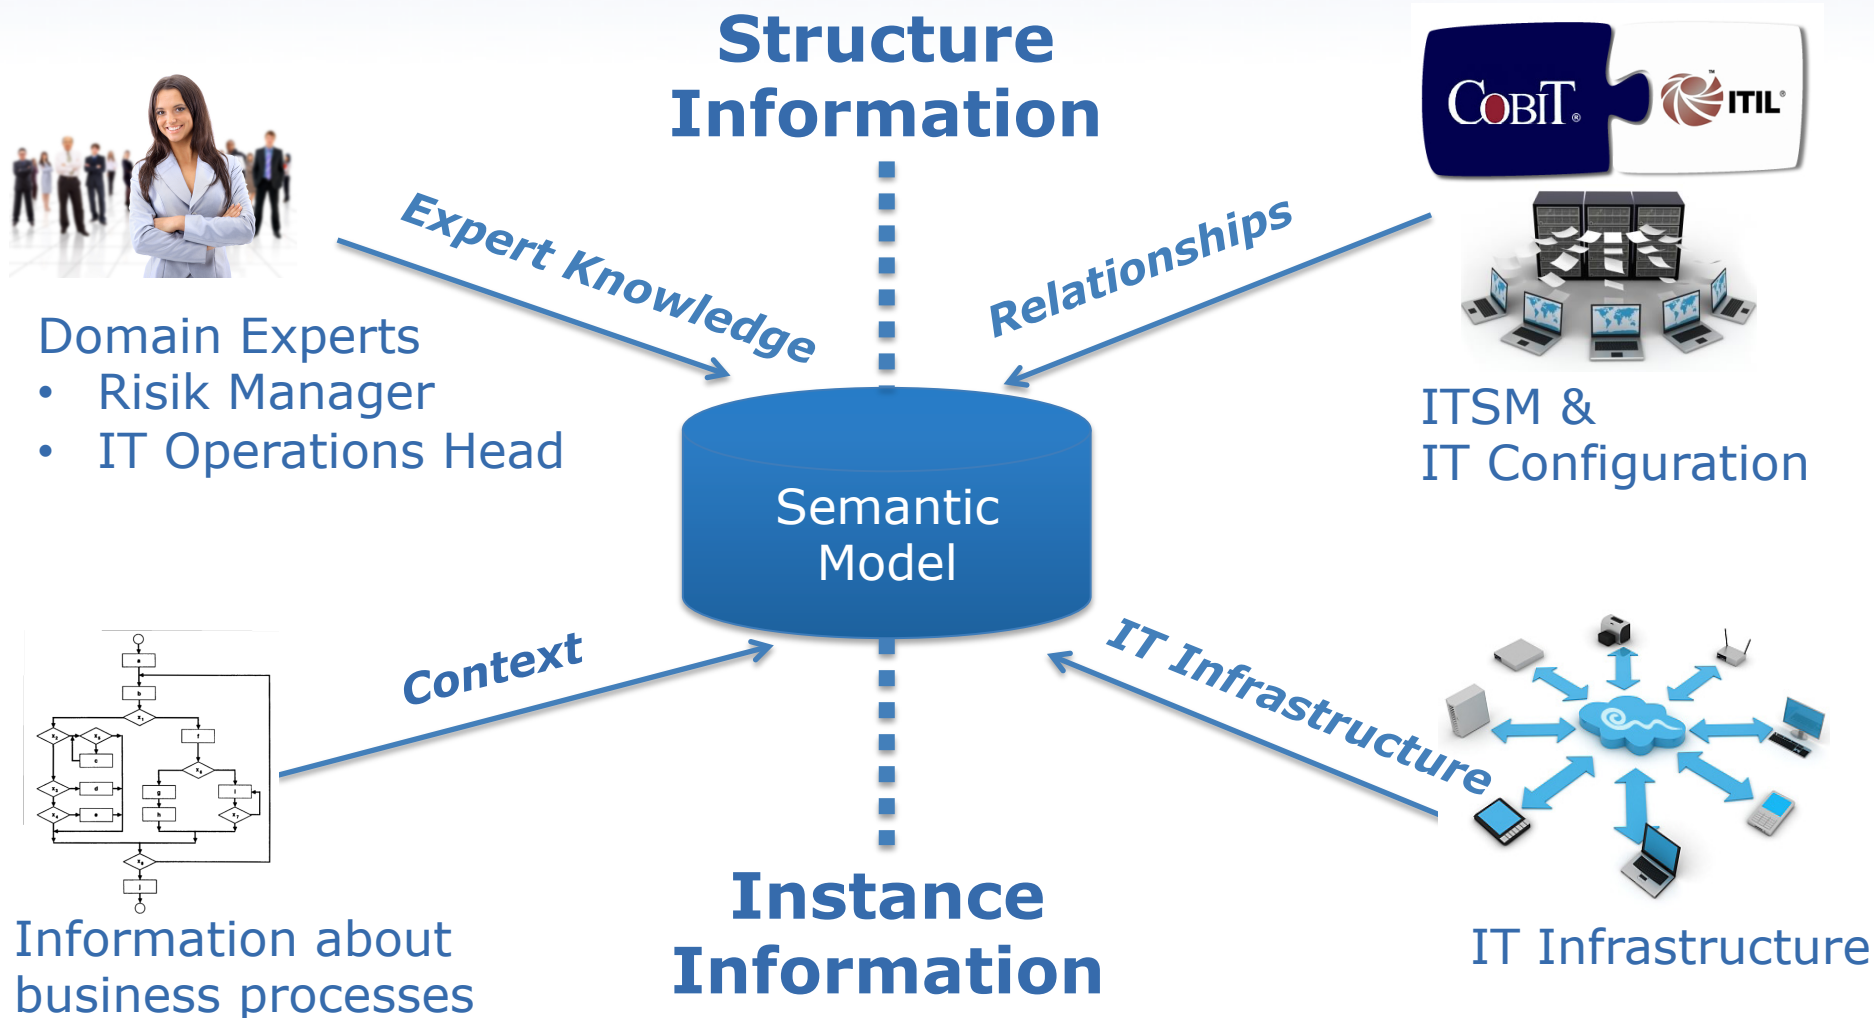

# IT Business Model

# Reference Architecture

# Ontologies for IT Monitoring Integration

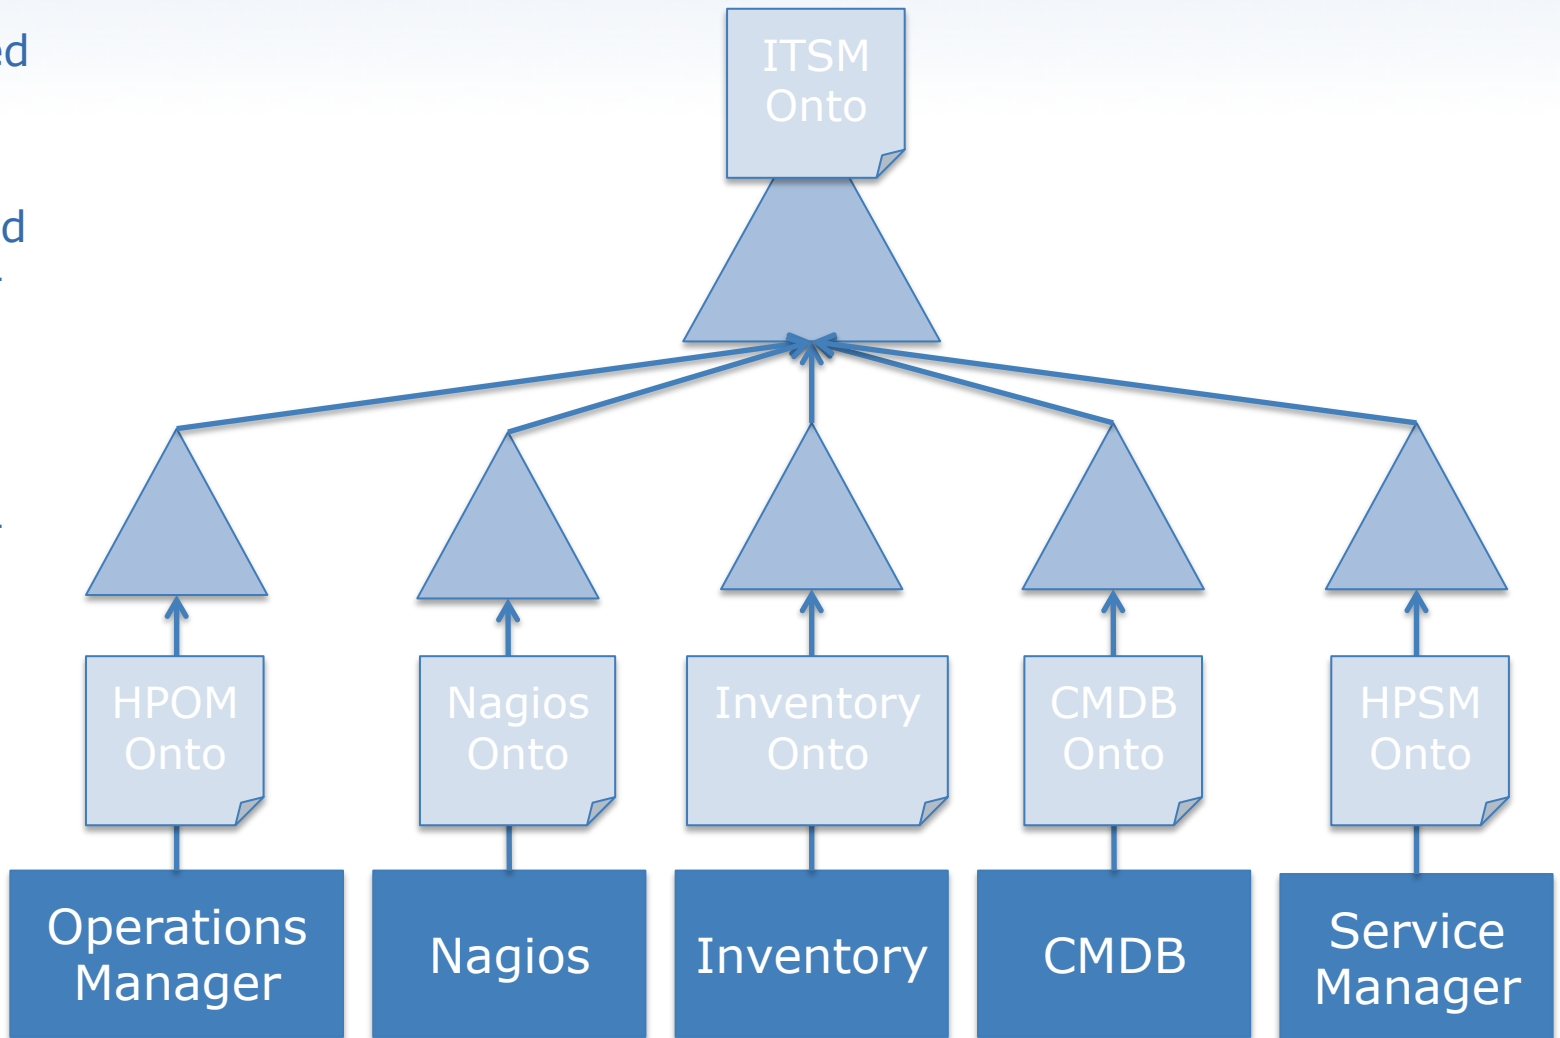

Abstracted View

Integrated Instance-Model

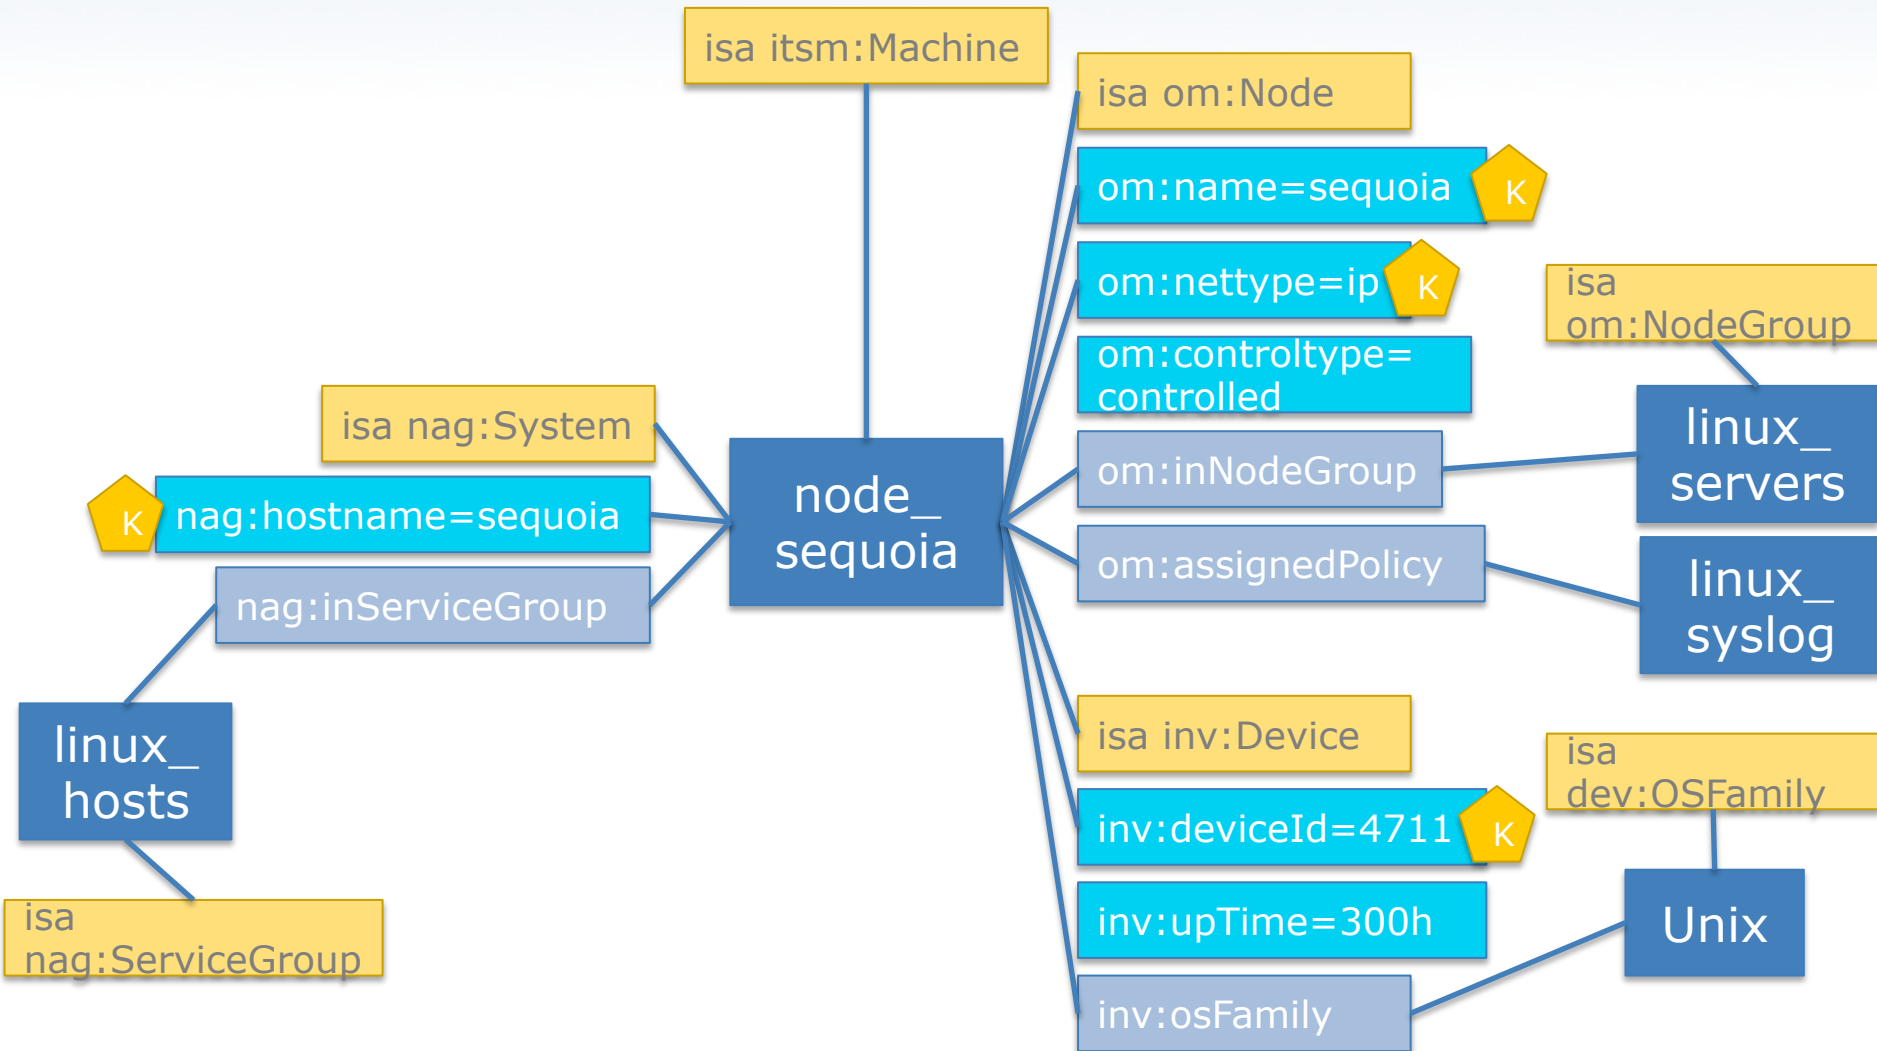

Tool-specific Instance-Models

Tool-specific Ontology

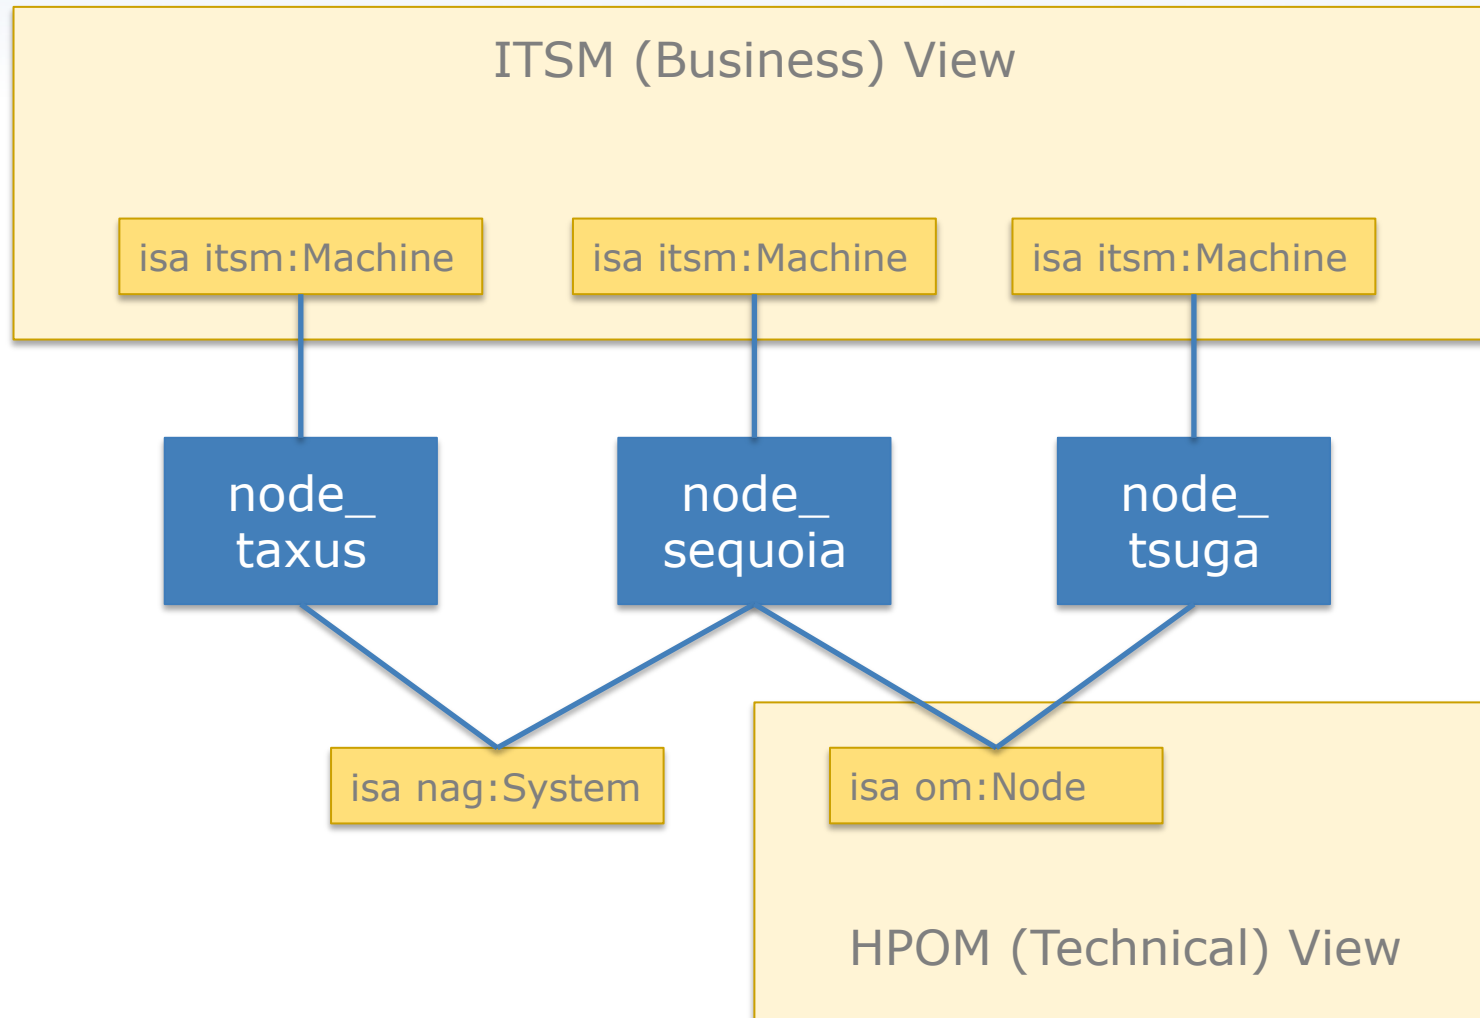

ITOM Apps

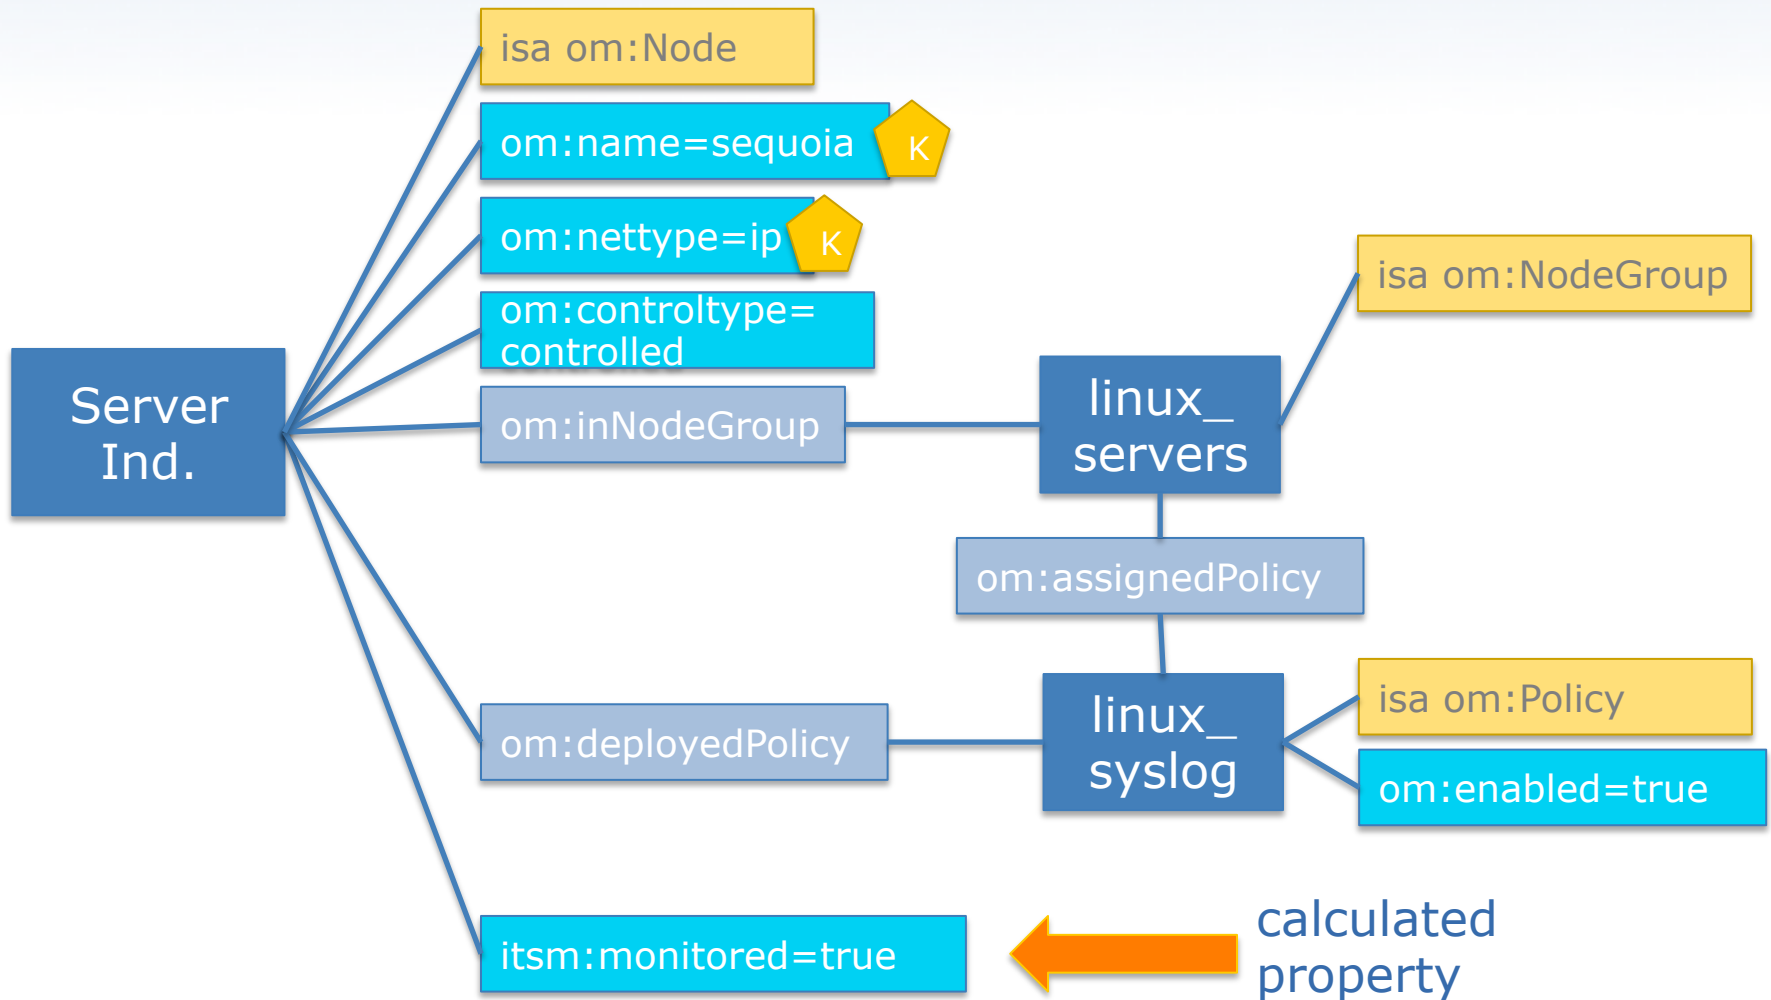

# Practical Integration with Ontologies

# Ontologies allow multiple Views

# Enrichment

# Usecase: Extend ITOM Application with Customer Concepts
